

NAME

xzmore, lzmore – view xz or lzma compressed (text) files

SYNOPSIS

xzmore [*file...*]

lzmore [*file...*]

DESCRIPTION

xzmore is a filter which allows examination of **xz**(1) or **lzma**(1) compressed text files one screenful at a time on a soft-copy terminal.

To use a pager other than the default **more**, set environment variable **PAGER** to the name of the desired program. The name **lzmore** is provided for backward compatibility with LZMA Utils.

e or **q** When the prompt **--More--** is seen, **more** or **q** will exit.
